

6T AND 7T SERIES SUBMERSIBLE PUMPS NOW FEATURING STAINLESS STEEL IMPELLERS.

Known for proven performance in the toughest conditions, the 6T and 7T Series Berkeley submersibles now feature stainless steel impellers, an industry first, to set new standards for reliability and durability. Also, these models now feature corrosion resistant all-rubber bearings. Berkeley engineers even re-designed the upthrust in the top bowl and replaced the thrust screw and nut with durable upthrust washers.

These design changes provide improved protection to the shaft and wearing area, which is especially critical in abrasive water conditions. Extensive field testing over the past twelve months has shown excellent results.

Models affected include:

6T-75	7T-350
6T-90	7T-450
6T-155	7T-500
6T-200	
6T-250	
6T-275
