

The Dosmatic Advantage™

INLET AND SOLUTION FILTERS AND ASSEMBLIES

WHY USE FILTERS?

Clogged filters can shut down a watering system and cause injectors to stop working properly. Dosmatic carries a number of high quality inlet water and solution filter assemblies for installation in watering systems with Dosmatic injectors and medicators. Inspecting the filters in your watering system is important as a regular part of your maintenance checks.

Dosmatic makes sediment removal easy with its high-quality inlet water filters:

- ◆ Sediment is visible through the clear bowl so you know when the filter needs cleaning
- ◆ Filter uses centrifuge spin-down separation for more efficient sediment removal
- ◆ Molded, non-corrosive materials
- ◆ The clear bowl is easily removed by hand for thorough cleaning

The inlet water filters available from Dosmatic consist of a fine mesh screen in a bowl/body assembly. Dosmatic recommends the 140 mesh as the filter directly in front of its injectors. However, other mesh sizes can be used to augment filtration in the water line and are available by calling our Customer Service Department at (800) 344-6767.

Dosmatic filters are available in complete assemblies, as well as the individual parts – bowls, bodies, screens and o-rings – for customer convenience.

Dosmatic also offers a variety of solution filters to insure that the chemical solution being injected into the water line is as clean as possible.

Call (800) 344-6767 or (972) 245-9765 today for pricing and availability!
