### **Rainbird ESP - Irri-Trol - Buckner Modular - Superior Sterling Central and Maintenance controls for remote ready controllers**

Easily and economically convert your remote ready controllers (Irri-Trol, Modular, Sterling etc.) into a radio control system (central and/or maintenance). Add full two way programmability for stand alone operation from a centrally located PC or just add maintenance radio control all in just minutes per controller. If you have remote ready controllers and would like to remotely control them or even program them as stand alone controllers without having to leave the house or office, **EICON** has the perfect answer with the **EICON Universal**, or **Ceres** central control systems. Any of the central or maintenance radio control modules may be added in 5 minutes or less to any remote ready giving them full two way hand held radio control and/or full two way radio central programmability and control. All of the features of **EICON** controls are possible with the remote ready **Ceres Retro Link**, including telephone, radio, hardwire, and direct notebook PC connection. With the remote ready **Ceres Retro Link**, new features may be added

in just minutes by reprogramming the module over the phone or by connecting a PC to the standard communications port.

The remote ready **Ceres Retro Link** provides 16 full featured stand alone programs operating up to 96 stations per module, ET, Rain, flow meter, flow graphing, program and flow logging, current sensing, automatic problem station elimination, etc. i.e. more than the usual full featured stand alone but also more than the usual full featured central control system. the **Retro Link** module will fit safely inside the host controller enclosure and use 2 way FM radio for obstacle penetration and range. The hand held radio is not only the remote controller for the system but also provides 2 way voice communications that may be incorporated into an existing radio communications system. All **EICON** hand held remote control features are included in the **Ceres Retro Link** modules including individual station rain days off that decrement automatically, automatic sequential syringe, single stepping, automatic program control, enhanced manual/auto control of stations, and much much more. Upgrade any **EICON** control system to **Ceres** at any time without having to replace any hardware. Contact **EICON** for details and pricing.
