PERFORMANCE CURVE

DIMENSIONAL DATA

SPECIFICATIONS

Total basin capacity: 22.8 U.S. gallons

Capacity per pump cycle: 5.6 U.S. gallons

Cover material: Structural foam (steel optional)

The PAC-Series systems by Liberty Pumps are an economical solution for adding an optional bathroom or fixture in a residential application where occasional use is anticipated. It is not designed for whole-house applications or jobs where the system may see extensive use with higher fixture counts. Select a larger Liberty package system for higher volume applications. *Consult the factory for proper pump and system sizing.*
