

Welcome to the NewAge of Soil Pipe

## NewAge Casting Features & Benefits

### Raw Materials:

- **NAC** 95% Virgin Pig Iron.
- **Competition** 100% Scrap Iron. Old Engine Blocks, Brake Drums, Radiator Parts, etc.....

By using virgin pig iron the density and uniformity of the fitting and pipe is more consistent. This consistency allows for our product to not experience porous holes or cracks that are typical in our competition.

### Coatings:

- **NAC** Coatings are applied in a uniform method using a combination of roller and spray technique to keep the outside and inside of the pipe and fittings smooth and clear of any obstruction.
- **Competition** Pipe and fittings are "dipped" into an oversized vat of liquid tar and allowed to drip dry. Once this dries there are obstructions that occur on the outside of the pipe and on the inside.

The smoothness of the pipe on the outside is important as the Couplings used to install the product must "seat" perfectly and tightly with zero leaks. The inside smoothness is critical for longevity of the system. If there are any obstructions on the inside, solids will collect over time and a blockage is unavoidable.

### Product Shipping and Protection:

- **NAC** All Fittings and Pipe are stored inside at our facility and when shipped all pipe and fittings are wrapped to protect from the harmful elements to ensure quality.
- **Competition** All Fittings and Pipe are immediately put outside once the manufacturing process is completed. The product is never protected.

By protecting the product it allows for the pipe to be stored on the job site or at our wholesaler's yard still encased in the black plastic. This allows for new and clean product to always be delivered to the job site.

### Warranties:

- **NAC** 3 years
- **Competition** 90 days

We feel strongly about the quality of our product to warrant the product beyond the one year that the industry typically sees from other manufacturers. We are also longer than our largest competitor nationally (Tyler Pipe).
