

Climate Mat™

Viega ProRadiant™ Heating and Cooling System
For Light and Medium Commercial Buildings

Viega Climate Mat

Climate Mat is Viega's newest manufactured system of ProRadiant heating and cooling.

The Climate Mat system enables installers to do large areas of flooring faster and more efficiently than traditional floor systems. ProRadiant offers comfort, efficiency and versatility.

- Reduced installation time.
- Patent pending tubing securement method guarantees desired tubing spacing.
- Pre-pressurized tubing eliminates downtime.
- Pre-engineered design taking the guesswork out of installation.
- No balancing needed due to same circuit lengths.

As a systems solution provider, Viega provides everything you need. This includes components, technical support services, system design and CAD layouts for ease of installation. Discover how Viega ProRadiant technology will maximize customer's satisfaction. Visit www.viega.com or call 1-800-976-9819.

The newly developed spacer strips and clips are designed to securely hold ViegaPex™ Barrier tubing during the concrete pour. The special design of the spacer clips prevent tubing from coming loose from spacer strips. Spacer strips are evenly spaced to hold Climate Mat to surface below.

Climate Mats are delivered with shipping headers and sufficient leader length for rough in on site. Later in the construction process shipping headers are cut off and replaced with permanent manifold. Colored sleeves on shipping header indicate individual circuit supply and return line. Climate Mats are factory air pressurized. Shipping header is equipped with quick check valve for onsite quality control.

Climate Mats are perfectly suited for large preferable rectangular or square slabs you find in warehouses, car garages, museums, schools, airport terminals etc.

With Climate Mat radiant heating/cooling becomes an economical solution for commercial space condition. ViegaPEX Barrier has an outer layer of PE to protect the EVOH oxygen diffusion barrier. It is the ideal solution for use in hydronic radiant heating/cooling systems.
