INSTALLATION
IS AS EASY AS
1 - 2 - 3

2

Connect the supply feed to the tee pattern FIP connection.

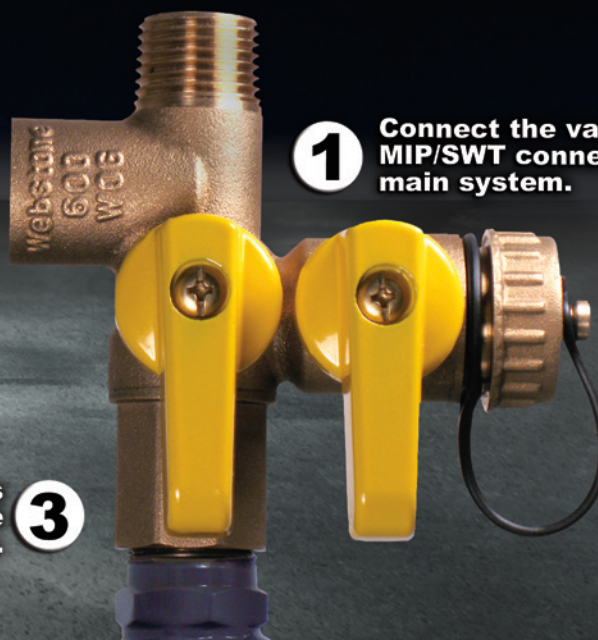

3

Connect the expansion tank's standard 1/2" MIP Connection to the valve's FIP connection.

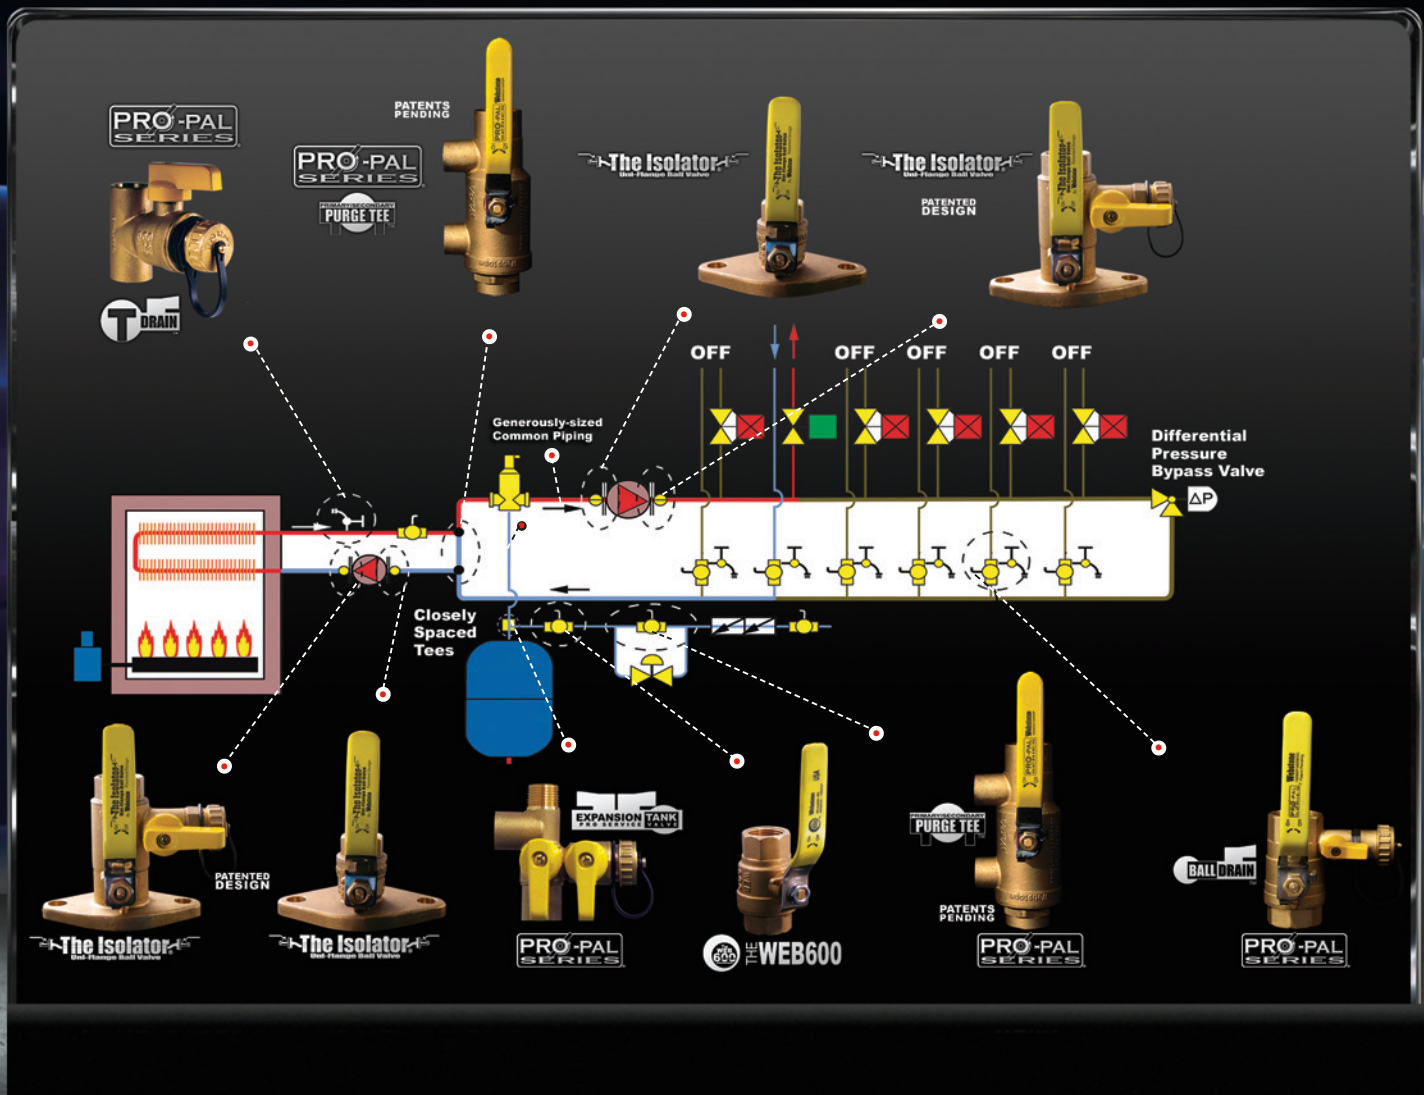

1

Connect the valve's MIP/SWT connection to the main system.

To Service – simply close the expansion tank isolation valve, connect a hose to the drain outlet and open the drain valve. The pressure in the tank will cause the contents to drain from the unit quickly and without spillage.
