By-Pass & Filter Feeders

By-Pass Feeders

Neptune By-Pass Feeders are a convenient method of introducing treatment chemicals into closed circulating water systems.

Neptune By-Pass Feeders are ideal for treating hot and chilled water circulating loops used in heating and air conditioning systems, process heating and cooling or large engine water jackets.

Neptune offers two styles of By-Pass Feeders: A vertical style with dish bottom in and a vertical style with dish bottom out.

Filters are available for system cleanup and monitoring.

A high pressure cap rated to 300 psi is now standard. The first closure improvement in over two decades.

Filter Feeders

The Neptune Filter Feeder combines chemical addition and high capacity filtering in one piece of equipment. It is a convenient way to introduce solid or liquid chemicals into hot or cold water closed circulating systems.

- Eliminates need for separate By-Pass Feeder and filter.
- Filtration can be achieved at the same time as chemical addition.
- Extended neck with top inlet allows simple installation of filter bag and basket.
- Filter bags are available in 50, 20, 5 and 1 micron ratings. (Order separately.)
- Filter bags are quickly and easily replaced.

By-Pass Feeders

Caps

All Neptune By-Pass Feeders offer the new style, quick opening, high pressure closure.

These closures offer better sealing with less force and eliminate the need for tools. Design binds cap

tightly when under pressure making it necessary to bleed pressure from tank before removing cap.

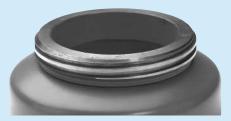

Underside of cap which contacts liquid is epoxy-coated.

OLD STYLE CAPS Three lug, ½ turn design rated to 200 psi.

NEPTUNE HIGH PRESSURE CAP Coarse thread, 2½ turn design rated to 300 psi.

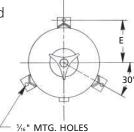

Vertical Style – Dish Bottom Out

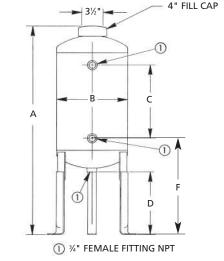

The "DBF" series features wide-mouth caps manufactured by Neptune. These caps utilize a square section "O" ring seal and will *close easily by hand*. Advantages of this series are demountable leg extensions and a full bottom drain. Optional Filter Bag Kit may be added.

"DBFC" models include a built-in

support and mounting for a cartridge filter (order cartridge separately).

See page 3 for filter specifications.

Filter Bag Kits

Available for all "VTF" and "DBF" models up to 10 gallons. Kit includes bag, bag frame, tubing and connectors. The addition of a filter bag allows the By-Pass Feeder to function simultaneously as a side stream filter. (A clean bag is rated at approximately 30 microns.) Cannot be used with DBFC models.

Vertical Style – Dish Bottom In

The "VTF" series is the most popular and economical of the by-pass feeders available from Neptune. The series uses the same wide

caps described in the "Dish Bottom Out" style. Optional Filter Bag Kit may be added.

Features

- Stainless steel dissolving basket holds and fully supports the filter bag inside (order bag separately).
- Ring-top bags feature handles for easy removal.
- "DB" type feeders have a full bottom drain and bolt on legs with anchor bolt holes.
- Model FTF-5150HP features oversize 1½"inlet and outlet connections. Can be used for system cleanup with high volume pumps where high flow rates are desired for fast clean-up or flush-out prior to start-up.
- "CL" Models feature a welded base to allow bolting to the floor or other mounting surface. Four holes for %" bolts are provided on each Anchor Bolt Plate.
